

EVIG OBD

13th March 2024

Guide

OBD2 stands for On-Board Diagnostics II. It is a standardized system that is used by EVIG to monitor and rapport information about the vehicles status and possible issues. The system is integrated in EVIGS computer and is continuously collecting data from different sensors and components in EVIG.

By connecting a reader to EVIGS OBD2-port, located underneath the dashboard on the left-hand side, you can get valuable information about your vehicle. Regular OBD readers with support for ISO 15765 can be used with EVIG.

If you have any problems, or want to know more, please send an e-mail to Support@cleanmotion.se
